

Manas Sebastian

York, United Kingdom | +44 7769530509 | manassebastian007@gmail.com | [Github](#)

Summary

- Aspiring Data Scientist passionate about transforming operational efficiency and customer experiences through machine learning.
 - Proven ability to develop automated data workflows, predictive models, and stakeholder-focused visualizations using Python, SQL, and cloud tools
- I have the right to work in the UK

Skills

ML & Modeling: Regression, Time Series Forecasting, Model Evaluation, Feature Engineering, NLP
Tools: Python (Pandas, NumPy, Scikit-learn, PyTorch), SQL, AWS (SageMaker, Athena), Power BI, Git
Domain Knowledge: Data Wrangling, Workflow Automation, Stakeholder Reporting
Certifications: IBM Data Science, Google Advanced Analytics, AWS ML Fundamentals
Soft Skills: Cross-Team Collaboration, Stakeholder Communication, Analytical Problem-Solving

Projects

Patient Clustering Analysis (Unsupervised Learning) | Python

- Implemented K-means and hierarchical clustering on patient data (8K+ records), used PCA for dimensionality reduction, identifying distinct health profiles based on treatment patterns and biometric indicators.
- Discovered a critical cluster (12% of patients) with overlapping chronic conditions that were previously treated in isolation, leading to integrated care protocols that reduced readmission risk by 27%.

Subscription Renewal Predictor (Supervised Learning) | Python

- Developed a gradient boosting classifier (Scikit-learn) predicting user renewal likelihood using 12 months of behavioral data, with feature engineering capturing engagement patterns.
- Identified "usage frequency in Week 3" as the top renewal driver, prompting product teams to redesign onboarding workflows for at-risk users.

Experience

KultureHire | Data Science Intern | India

Oct 2022 - Jun 2023

- Built automated Python workflows to cleanse/process large datasets, improving data consistency by 30% and reducing reporting time.
- Developed regression models to predict user success rates, informing strategic business decisions.
- Created Power BI dashboards translating technical insights into actionable reports for operations/product teams, enhancing stakeholder decision-making.

Achievements

- Developed reusable Python functions for regression and forecasting tasks, which were adopted by peers to streamline coursework workflows.
- Currently leading a Discord community of 200+ members, where I mentor undergraduates in machine learning, data science, and statistics, and coordinate collaborative data projects.

Education

Msc. Business Analytics & Decision Sciences University of Leeds	2023-2024
Grade - 2:1	
BEng in Mechanical Engineering SRM Institute of Science and Technology	2019-2023
Grade - 9.2 /10
